### Calm + Consistent

Rift and Quartered oak is very unique and sought after for its stability and unique color and grain pattern. Due to the way it's cut, this product offers supreme stability in humid environments. The unique grain comes from the wood's medullary rays (quarter sawn only). Those are the "flecks" of grain you see that are actually capillaries inside the wood that create a ribbon-like effect. Perfect for those who prefer less character in wood products.

Made in America.
